ADVERSE CHILDHOOD EXPERIENCES

*An
Introduction*

WHAT IS AN ACE?

Adverse childhood experiences, or ACEs, are **traumatic events** that occur in childhood (0-17 years) including divorce, substance abuse in the home, violence, death or incarceration of a parent, and neglect. The higher an individual's ACE score, the more likely he or she is to experience chronic health problems, mental illness and substance abuse in adulthood. High ACE scores have also been linked to repeated job loss, incomplete education and homelessness.

On the following pages, you will have the chance to get to know a current or former UGM resident who experienced severe childhood trauma. As you keep reading, **we welcome you to pray** for your featured individual and for the countless men and women battling the effects of childhood trauma today.
